Office: (404) 778-4067
Fax: (404) 778-4778
Email: Shenita.williams@emory.edu
Selected Objectives:

1. Describe the characteristics of healthy skin and soft tissue and implications for routine care.
2. Identify clinical characteristics and interventions for prevention and management of each of the following: superficial friction/shear injury; skin tears; incontinence-associated dermatitis; pressure-shear injury.
3. Describe key elements of an effective program for preventing skin breakdown in the “at risk” population.
4. Describe current legal and regulatory issues related to nosocomial skin breakdown.
5. Describe the process for partial thickness and full thickness wound healing and implications for wound assessment and management.
6. Identify systemic factors that impact on wound healing, and implications for nursing intervention.
7. Accurately document wound status to include all critical parameters.
8. Describe guidelines for accurate staging of pressure ulcers including issues related to “reverse staging”.
9. Utilize knowledge of assessment and staging guidelines to accurately assess and document wound status.
10. Use DIWAMOPI acronym to identify principles of evidence-based topical therapy.
11. Describe indications and options for debridement of necrotic wounds.
12. Identify clinical characteristics and guidelines for management of the following, to include indications and recommended technique for wound culture: osteomyelitis; cellulitis; critical colonization.
13. Describe clinical significance and guidelines for management of closed wound edges and hypertrophic granulation tissue.
14. Identify dressing options and considerations for each of the following: exudative wound with depth or tunneling; dry wound with depth or tunneling; shallow exudative wound; shallow dry wound.
15. Utilize understanding of wound management principles and dressing options to provide appropriate topical therapy for specific wounds.
16. Discuss management of refractory wounds to include potential causative factors and options for management.
17. Describe pathology, clinical presentation, and management for each of the following: venous ulcer; neuropathic ulcer; arterial ulcer.
18. Identify key interventions to be included in a diabetic foot care program.
20. Given an actual or hypothetical wound, identify guidelines for comprehensive management to include correction of etiologic factors, systemic support, and appropriate topical therapy.

Successful completion of this course is demonstrated by attendance for all days and score of >/= 80% on the post test and submission of completed anonymous course evaluation.

Registration Fee $ 875
Due when registration form is submitted.
