Course Description

This 3.5 hour course is designed to provide the healthcare professional with basic knowledge and skills needed to provide care for patients with simple Enteric, Colonic or Urinary fistulas. The emphasis will be on current research findings and guidelines for care in all settings. The participant will gain understanding in the area of disease states leading to fistula development and skill in the management of the simple fistula to include pouching techniques, product selection, and treatment of common perifistula skin breakdown. The course will include discussion concerning the psychological aspects of living with a fistula and adaptation of the fistula patient. Attendees will gain basic knowledge in the management of percutaneous tubes.

Selected Objectives:

1. Describe the etiology and pathology of fistulas
2. Demonstrate procedure for basic pouching and management of fistula using readily available products
3. Demonstrate strategies for maintaining perifistula skin integrity
4. Discuss the psychological impact of fistula and strategies to facilitate adaptation
5. Describe guidelines for management of gastrostomy, biliary, nephrostomy and suprapubic tubes
6. Demonstrate securement of gastrostomy tube using readily available products.

Successful completion of this course will be demonstrated by attendance for the half day course and completion of the course evaluation.
